

Datalock

Datalock's patented technology blocks confidential data from leaving the organization via email, email attachments or USB devices such as flash memory sticks. Datalock actually scans the content before it can leave the organization and determines whether or not a policy violation is being committed. If there is a violation, it blocks the action. Works even on laptops that never connect to the corporate network.

Email Leak Prevention (includes webmail)

- Automatic policy enforcement based on scan of outgoing content
- Prevent leakage via email bodies and email attachments
- Be alerted to all policy violations

Endpoint USB Leak Prevention

- Automatic policy enforcement based on scan of outgoing content
- Prevent leakage via USB devices
- Be alerted to all policy violations

Scan Data At Rest to determine where confidential data resides:

- Automatically scans all new files on all PCs in your organization
- Shows you where policy-violating documents exist
- Allows you to remotely delete those documents if desired to bring you into compliance and eliminate risks

If you want to take a look and instantly see what the software looks like without having to install anything, just log into the Test Drive below and you'll be able to see a fully working version of the software.

Just type in www.sonarcentral.com and use this info to log in:

Username: test
Password: drive

Additional Information:

- Supports different settings for each user
- No hardware required
- Can be used in a Terminal Server or Citrix environment
- Ties in with Active Directory
- Quick and easy silent deployment with no user prompts if desired
- Can enforce policy even on laptops that never connect to the corporate network
